                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mus musculus (Mouse).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   FUNCTION: COMPONENT OF THE BACTERICIDAL RA-REACTIVE FACTOR RAFF WHICH SPECIFICALLY BINDS TO RA AND R2 POLYSACCHARIDES EXPRESSED BY CERTAIN ENTEROBACTERIA. IT TRIGGERS THE ACTIVATION OF COMPLEMENT CASCADE BY ACTIVATING THE C4 AND C2 COMPONENTS. IT ACTIVATES THE C4 COMPONENT BY CLEAVING THE ALPHA-CHAIN OF C4.

SUBUNIT: RARE CONSISTS OF A COMPLEMENT-ACTIVATING COMPONENT (CRARF) AND A POLYSACCHARIDE-BINDING (MANNOSE-BINDING) COMPONENT.

CRARF IS AN HETERODIMER OF A HEAVY (P70) AND A LIGH CHAIN (29)

"The A5 antigen, a candidate for the neuronal recognition molecule, has homologies to complement components and coagulation factors.";

Neuron 7:295-307(1991).

-I- FUNCTION: RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOU SYSTEM, IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS (B SIMILARITY). PRESUMED TO BE INVOLVED IN THE NEURONAL RECOGNITION BETWEEN THE OPTIC NERVE FIBERS AND THE VISUAL CENTERS.

-I- SUBCELLULAR LOCATION: Type I membrane protein.

-I- TISSUE SPECIFICITY: RETINAL GANGLION CELLS AND VISUAL CENTER
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              entities requires a license agreement or send an email to license@isb-sib.ch

IMMUNOI. 166:7612-7616(2001).

FUNCTION: C1S B CHAIN IS A SERINE PROTEASE THAT COMBINES WITH C1Q AND C1S TO FORM C1, THE FIRST COMPONENT OF THE CLASSICAL PATHWAY OF THE COMPLEMENT SYSTEM. C1R ACTIVATES C1S SO THAT IT CAN, IN TURN, ACTIVATE C2 AND C4.

CATALYTIC ACTIVITY: CLEAVES COMPONENT C4 TO C4A AND C4B, AND CAMPONENT C2 TO C2A AND C2B.

SUBUNIT: C1 IS A CALCIUM-DEPENDENT TRIMOLECULAR COMPLEX OF C1O, R AND S IN THE MOLAR RATION OF 1:2:2. ACTIVATED C1S IS AN DISULFIDE-LINKED HETERODIMER OF AN HEAVY CHAIN AND A LIGHT CHAIN.

DISEASE: Defects in C1S are the cause of selective C1s deficiency, that is associated with early onset multiple autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  lineages of mannose-binding

- SUBUNIT: C1 IS A CALCIUM-DEPENDENT TRIMOLECULAR CON AND S IN THE MOLAR RATION OF 1:2:2. C1R IS A DIMER CHAINS, EACH OF WHICH IS ACTIVATED BY CLEAVAGE INTO AND B, CONNECTED BY DISCULFIDE BONDS.

- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1.

- SIMILARITY: CONTAINS 2 SUSHI (SCR) DOMAINS.

- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

"Developmentally regulated expression of a cell surface protein, neuropilin, in the mouse nervous system.";
J. Neurobiol. 29:1-17(1996).

-I- FUNCTION: RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SEMAPHORINS. IT BINDS TO SEMAPHORIN 3A, THE PLGF-2 ISOFORM OF PGF, THE VEGF-165 ISOFORM OF VEGF AND VEGF-B. COEXPRESSION WITH KDR RESULTS IN INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS.
                                                                                                             SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 which is related to the prosupulta unit in the prosupulta unit in the prosupulta unit in the prosupulta unit in the provides a putative astacin metalloendopeptidase.*;

Dev. Biol. 163:175-183(1994).

-i- FUNCTION: CLEAVES THE C-TERMINAL PROPERTIDES OF PROCOLLAGEN I, AND II. INDUCES CARTILAGE AND BONE FORMATION.

-i- CATALYTIC ACTIVITY: Cleavage of the C-terminal propeptide at the C-terminal propertide at the C-terminal properties at the C-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-FEB-1996 (Rel. 33, Created)
01-FEB-1996 (Rel. 33, Last sequence update)
16-OCT-2001 (Rel. 40, Last annotation update)
Bone morphogenetic protein 1 precursor (EC 3.4.24.19) (BMP-1)
(Procollagen C-proteinase) (PCP) (Mammalian tolloid protein)
